

41-A[®] LIQUID DRIFT RETARDANT ADDITIVE

DESCRIPTION:

41-A[®] is a liquid *drift retardant/deposition aid* for use in ground and aerial application of pesticides. 41-A[®] reduces drift by materially reducing the fines normally generated by nozzle and wind shear.

Significant advantages of 41-A[®]:

- Mixes easily with minimum agitation
- Goes into solution immediately
- Compatible with wide range of pesticides
- Effective at very low concentrations
- Does not lose effectiveness when pumped through mixing equipment.

APPEARANCE:

Fluid Polymer Dispersion with Light Solvent Odour

ACTIVES:

32% Polyacrylamide Polymer

STABILITY:

41-A[®] is guaranteed against packing for 12 months. After extended storage, some settling or separation is to be expected, however, normal shaking of the bottle will fully redisperse the product, and performance will be unaffected.

DIRECTIONS:

41-A[®] may be used with all water-emulsifiable pesticides. To insure complete and rapid hydration of 41-A[®], the materials to be added to the spray mix water must always be in the following order:

1. 41-A[®]
2. Wettable Powders
3. Other Additives (Surfactants, Spreaders, Stickers, etc.)
4. Liquid Pesticides

41-A[®] must be added to the mix water while mixing and preferably at the point of highest agitation which generally is where the liquid level in the tank is at or just below the injection point of the incoming water.

DILUTION RATIOS:

Suggested label concentrations are intended as a guideline only and based upon the assumption that influencing factors such as wind speed, boom height, aircraft speed, temperature, and thermal inversion conditions are within the scope of recommended practice.

FIXED-WING AIRCRAFT	40 ml/100 Litres
ROTARY-WING AIRCRAFT	23 ml/100 Litres
GROUND RIG OPERATIONS	15 - 30 ml/100 Litres

41-A[®] is effective at concentrations as low as 10 ml/100 Lt (minimum adverse conditions) and as high as 80 ml/100 Lt (very severe conditions).

HEALTH & SAFETY:

See product label and Material Safety Data Sheet for specific information.
